Value proposition

- *Garbage Flop* is a platform game.
The game requires you to race through recycled products in order to save the environment.
- By choosing more recyclable products, you can help the planet stay clean.

Game overview

Race

Racing through the recycled products

Levels

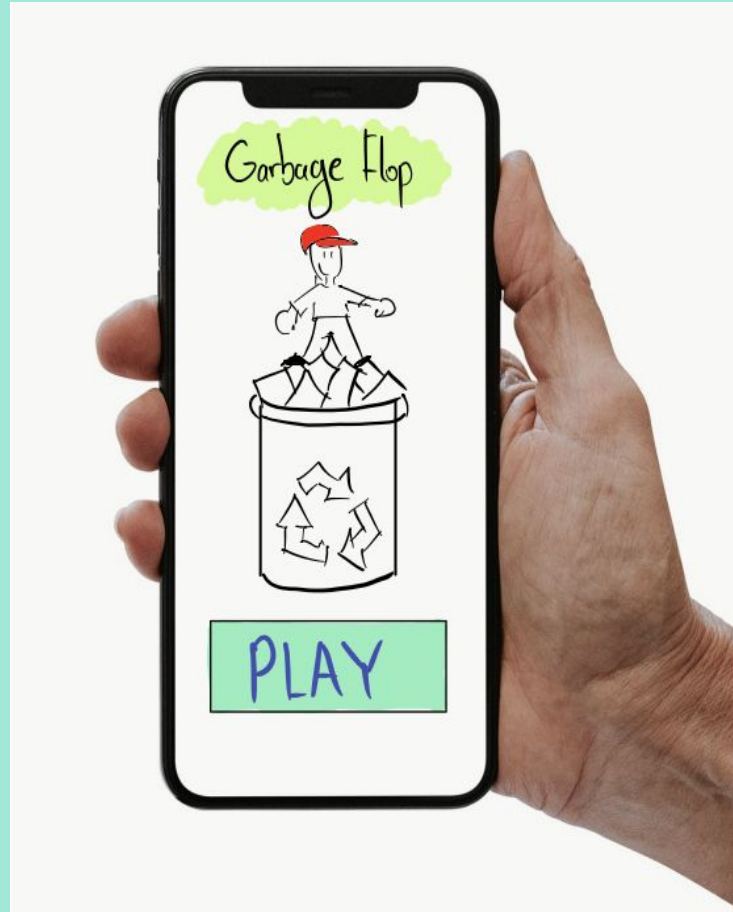

Each level has a different recycling topic

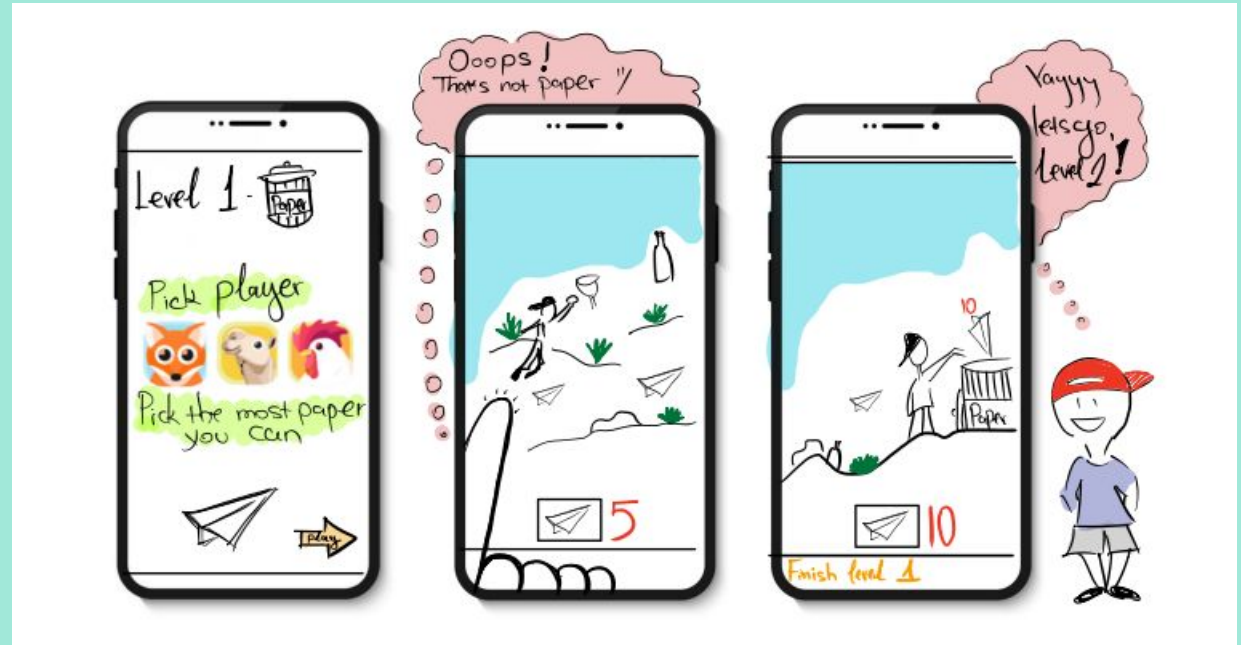

Speed

As the level increases the speed increases

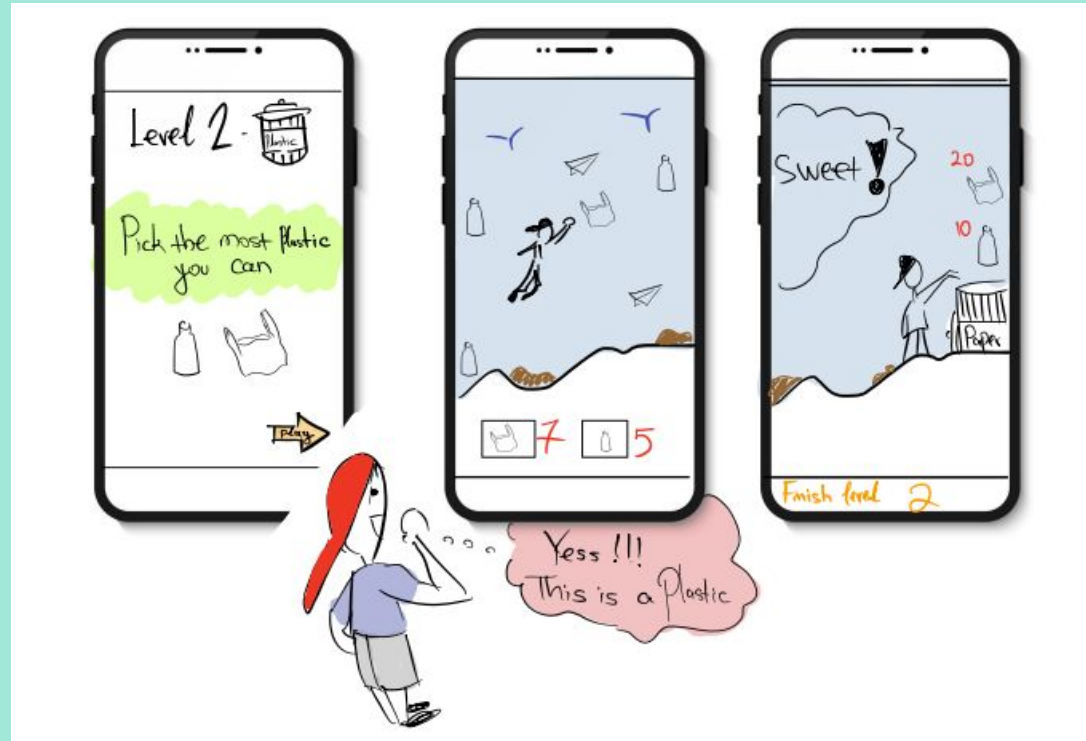

Sketches

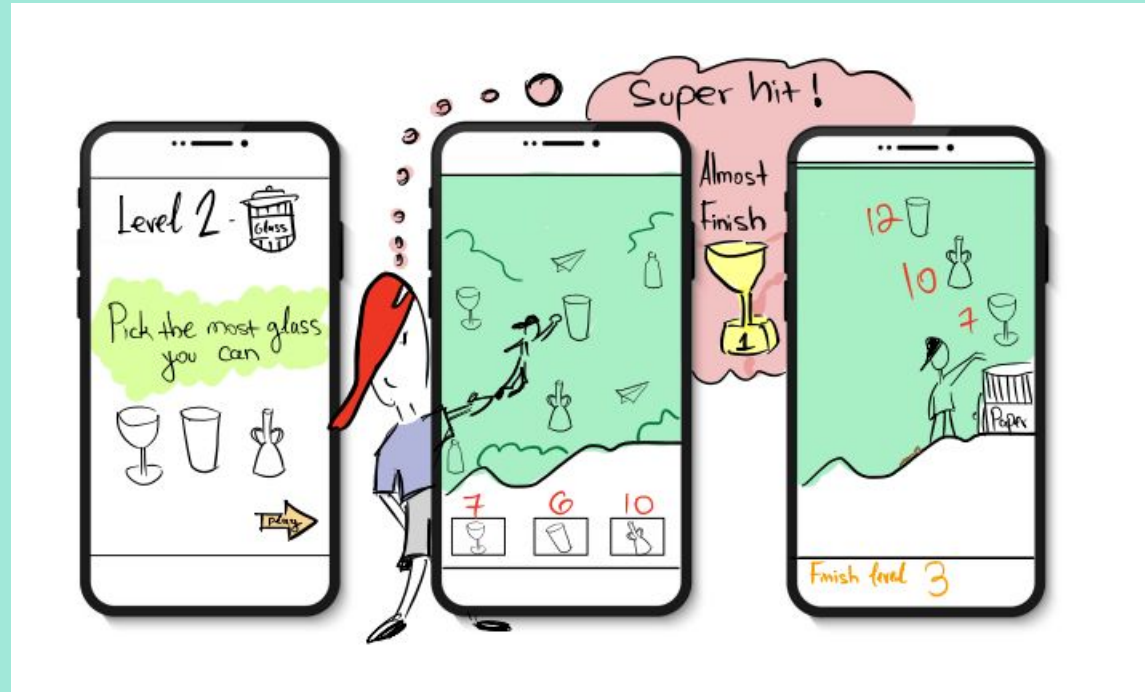

Level 1

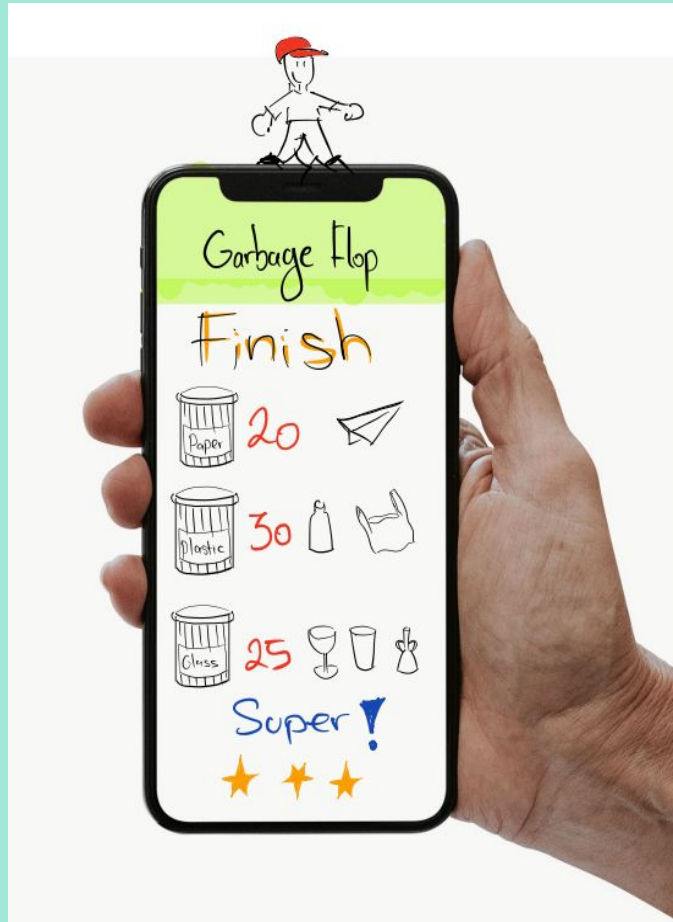

Level 2

Level 3

Game testing methodology

- Participants were ranging from 14-30 years old. All participants were not related to the project in order to gain an unbiased opinion.
- Participants were given a brief introduction to the game and asked to play all 3 levels.

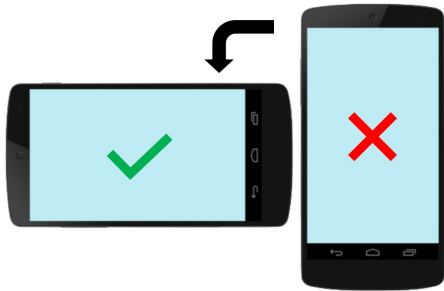

participant	A	B	C
age	23	14	30
Environment	At home	At home	At home
Game levels	1,2,3	2,1,3	3,2,1

Game testing methodology

- The players were asked to play the three levels.
- while writing notes about each one.
- We asked the players at the end of the session to give a grade and describe what needs to be improved.

Game Testing - improvements

changing the game layout from vertical to horizontal

Slowing down the character speed in the first levels

Adding more color to the game by changing the background and other items photos.

Prototype overview

Limitations

Multiplayer
game is not
possible

Hard coded features

Highest score
